

VETURU PRANEETH

UI/UX Designer | Product Design | Enterprise SaaS

LinkedIn: [linkedin.com/in/praneeth-veturu-630153214/](https://www.linkedin.com/in/praneeth-veturu-630153214/) | Github: <https://veturu-15.github.io/Veturu-praneeth/>
Phone number: 8367095788

PROFESSIONAL SUMMARY

UI/UX Designer Associate with 1+ year of shipped enterprise product experience, seeking to apply my expertise in wireframing, interaction design, and UI specification documentation to complex, large-scale product environments designing intuitive, scalable interfaces that maintain consistency across interaction design systems and deliver real impact for end users.

CORE SKILLS & COMPETENCIES

Design Execution: Wireframing, Screen-flow Diagrams, UI Specification Documentation, High-Fidelity Mockups

Prototyping & Testing: Interactive Prototype Development (Figma), Usability Testing, User Flows

Design Systems: Component Libraries, Interaction Pattern Consistency, Design Tokens, Accessibility Compliance

Research & Strategy: UX Research, Competitive Analysis, Trend Monitoring, Persona Development, Journey Mapping

Enterprise UX Specialties: Data Visualization, Navigation Architecture, Filter UX, Contextual Tooltips, Disabled-State Design

Collaboration: Cross-functional teamwork, Dev handoff, Minimal supervision delivery, Async & in-person communication

Tools: Figma, FigJam, Adobe Illustrator, Adobe Photoshop, Adobe XD

PROFESSIONAL EXPERIENCE

Designer Associate · Infor Birst --- Enterprise BI & Analytics SaaS

2025 – Present | India | 1+Year

- Created wireframes, screen-flow diagrams, and UI specification documents for enterprise BI features across the Birst analytics platform, maintaining strict consistency with existing interaction design patterns.
- Designed the complete side navigation system for Birst's accessibility-focused analytics dashboard — from information architecture through all interaction and error states.
- Designed the 'Create Filter' panel UI with advanced controls: duplicate-filter warning dialogs, aggregation dropdowns, date-type selectors, and allow-multiple-values toggle with full spec documentation for engineering handoff.
- Designed the Zoom Level toggle feature, surfacing +/- zoom controls in the chart viewport toolbar when enabled, with localization and scalability considered throughout.
- Designed the Impact Flow screen a node-link data lineage visualization in Space Management — including left-panel navigation, active node highlighting, and 'Shared connections only' toggle.
- Designed the gauge chart component and a segment color palette override system with smart disabled-state interactions and contextual tooltips ('Colors are controlled by the palette. Toggle off to enable').
- Contributed actively to the shared Birst design system, ensuring UI patterns were reusable and maintainable across multiple product areas.
- Organized personal time and workload to deliver consistently across multiple parallel feature tracks with minimal supervision.

UI Design Intern · Tech Mahindra Smart Academy

2024 | India | Internship

- Assisted in producing wireframes, mockups, and high-fidelity UI designs for client-facing digital projects.
- Built and implemented front-end components, translating UI designs into responsive, pixel-perfect interfaces.
- Collaborated with senior designers and developers, maintaining design consistency and meeting project deadlines.

KEY PROJECTS — INFOR BIRST

CS 01: Accessibility Dashboard & Smart Filter Panel · Navigation + Filtering UX

- Designed full side-navigation system, information hierarchy, and all states (active, hover, collapsed) for the Birst analytics dashboard.
- UI spec documentation covered duplicate-filter warnings, aggregation controls, date-type selectors, and accessibility compliance across all filter controls.

CS 02: Chart Settings Panel & Zoom Level Interaction · Chart Controls UX

- Designed a chart settings flyout panel with toggle controls (Stack, Group, Percent, Lock Axes, and Delay Charting) and the Zoom Level interaction — surfacing +/- controls directly in the chart viewport toolbar.
- Interaction logic connecting panel toggles to live chart behavior was fully documented for dev handoff.

CS 03: Impact Flow — Data Connection Graph · Data Lineage Visualization

- Designed the Impact Flow screen in Birst's Space Management module: a node-link graph mapping Connector → Subject Area → Filter → Report/Dashboard data lineage.
- Included: left-panel subject-area navigation with hierarchy search, active node highlighting, and 'Shared connections only' toggle with zoom controls.

CS 04: Gauge Chart & Color Palette Segment System · Data Visualization Design

- Designed the gauge chart component and a color palette override system with contextually disabled states and tooltip messaging for non-technical enterprise users.
- Balanced design complexity with clarity, ensuring the palette-controlled color states were immediately understandable without documentation.

EDUCATION

Bachelor of Technology — Electronics & Communication Engineering (ECE)

GMRIT (GMR Institute of Technology) | 2020 – 2024 | India

SOFT SKILLS

Quick Learner, Time Management, Team Collaboration, Creative Problem Solving, Attention to Detail, Effective Communication, Adaptability, Design Thinking
