

PRANEETH VETURU

UI/UX DESIGNER ASSOCIATE

Hyderabad, India | vpraneeth1507@gmail.com | +91 8367095788 | veturu-15.github.io/Veturu-praneeth | [LinkedIn](#)

PROFILE SUMMARY

UI/UX Designer with hands-on experience shaping enterprise BI/analytics interfaces for Infor's Birst platform, turning complex data workflows into clear, intuitive user experiences. Proficient in Figma and Adobe Creative Suite, with a strong grasp of design systems, data visualization and front-end fundamentals (HTML, CSS, Bootstrap, Git). Comfortable owning the full product design lifecycle research, wireframing, prototyping and visual design and has applied this across a growing portfolio of dashboard, mobile and web products.

SKILLS

Design Tools: Figma, Adobe Photoshop, Illustrator, iMovie, Adobe Premiere Pro (basic)

Front-End: HTML, CSS, Bootstrap, Git/GitHub

UX Practice: Wireframing, Prototyping, User Research, Usability Testing, Design Systems

Other: Data Visualization Design, Generative AI-assisted Design

PROFESSIONAL EXPERIENCE

Designer Associate | Infor

March 2025 – May 2026

Birst Enterprise BI/Analytics Platform

- Designed UI/UX for enterprise business intelligence features on the Birst analytics platform, working closely with product and engineering teams.
- Redesigned the Accessibility Dashboard and Smart Filter Panel to meet WCAG accessibility standards while simplifying complex filtering workflows for end users.
- Designed the Chart Settings Panel with Zoom Level controls, improving usability for detailed data exploration.
- Created the Impact Flow data lineage visualization, translating complex data relationships into a clear, navigable visual system.
- Built a Gauge Chart component with a configurable color palette system, contributing to a consistent, reusable design system across the platform.
- Earned Infor's Generative AI Certification, applying AI-assisted techniques to accelerate design exploration.

UI/UX and Front-End Development Intern | Tech Mahindra Smart Academy

August 2024 – January 2025

- Completed a structured UI/UX and front-end development program covering Figma-based design workflows, wireframing, prototyping and responsive front-end implementation with HTML, CSS and Bootstrap.
- Practiced end-to-end product design methodology — user research, wireframing, prototyping and visual design — through applied coursework and guided projects.

SELECTED PROJECTS

Infor Birst — Accessibility Dashboard & Smart Filter Panel

- Redesigned dashboard filtering to meet WCAG accessibility guidelines without sacrificing information density for power users.
- Conducted a component-level accessibility audit (contrast, focus states, keyboard navigation) and translated findings into revised filter and dashboard layouts.
- Simplified multi-condition filter creation into a guided, progressive-disclosure flow, reducing the steps needed for common filtering tasks.
- Collaborated with engineering to validate that redesigned components met WCAG 2.1 AA criteria before release.

Infor Birst — Chart Settings Panel with Zoom Level

- Designed granular chart configuration controls, improving analyst efficiency when drilling into large datasets.
- Introduced zoom-level controls allowing analysts to move between high-level trends and granular data points without leaving the chart view.
- Reorganized settings into logical groupings (data, appearance, axes) to reduce cognitive load for first-time users of the panel.

- Ran informal usability walkthroughs with internal stakeholders and iterated on control placement based on feedback.

Infor Birst — Impact Flow (Data Lineage Visualization)

- Visualized complex upstream/downstream data dependencies as an interactive flow diagram for non-technical business users.
- Designed an interactive node-and-edge visualization so users could trace how a data field is transformed across multiple sources and reports.
- Applied progressive zoom and node-collapsing patterns to keep large, complex lineage graphs readable at a glance.
- Worked with product managers to align the visualization's information hierarchy with real customer data-governance workflows.

Infor Birst — Gauge Chart & Color Palette System

- Built a reusable gauge chart component and color palette system adopted as part of the platform's broader design system.
- Defined accessible, semantically consistent color ranges (e.g. good/warning/critical states) reused across multiple chart types.
- Documented component specs and usage guidelines in the design system to support consistent adoption by other designers and engineers.

EDUCATION

B.Tech, Electronics and Communication Engineering

2020 – 2024

GMR Institute of Technology (GMRIIT), Hyderabad

UI/UX and Front-End Development Program

Tech Mahindra Smart Academy

CERTIFICATIONS

- Infor Generative AI Certification
- UI/UX and Front-End Development Certification — Tech Mahindra Smart Academy
